AMENDMENTS TO THE CLAIMS

1. (ORIGINAL) A recombinant nucleic acid containing at least a first nucleotide sequence operably linked to at least a second nucleotide sequence containing a transgene to be expressed, wherein the first nucleotide sequence contains a regulatory sequence selected from the group consisting of SEQ-ID-No. 1, SEQ-ID-No. 2, and a biologically active derivative thereof.

2. (ORIGINAL) The recombinant nucleic acid according to claim 1, wherein the regulatory sequence is a promoter sequence selectively inducible by chemicals.

3. (ORIGINAL) The recombinant nucleic acid according to claim 2, wherein the chemicals are selected from the group consisting of organic compounds.

4. (ORIGINAL) The recombinant nucleic acid according to claim 3, wherein the organic compounds are selected from the group consisting of phenolic compounds, thiamine, benzoic acid, isonicotinic acid (INA), and derivatives thereof.

5. (ORIGINAL) The recombinant nucleic acid according to claim 4, wherein the phenolic compound is salicylic acid or a structural or functional derivative thereof.

6. (CURRENTLY AMENDED) The recombinant nucleic acid according to anyone of claims 1-to-5, further containing a

TC Art Unit:

Confirmation No.:

reporter system which comprises at least one nucleotide sequence, wherein the expression/transcription of said

nucleotide sequence results in a detectable signal.

(CURRENTLY AMENDED) A vector containing the recombinant 7.

nucleic acid according to anyone of-claims 1 to 6.

8. (CURRENTLY AMENDED) host organism containing

recombinant nucleic acid according to anyone of claims 1

to 6 or the vector according to claim 7.

9. The host organism according to claim 8, which (ORIGINAL)

is selected from the group consisting of a bacteria cell

and a plant cell.

10. (ORIGINAL) A transgenic plant containing at least the

recombinant nucleic acid according to claim 1.

11. (ORIGINAL) The transgenic plant according to claim 10,

wherein the recombinant nucleic acid is stably integrated

into the genetic material.

12. (CURRENTLY AMENDED) The transgenic plant according to

claim 10-or 11, wherein the transgene contained in the

second nucleotide sequence is transiently expressed.

13. (CURRENTLY AMENDED) The transgenic plant according to

anyone of claims 10 to 11, wherein the expression of the

transgene contained in the second nucleotide sequence is

selectively induced upon treatment with chemicals.

Confirmation No.:

The transgenic plant according 14. (CURRENTLY AMENDED)

claim 13, wherein the chemicals are selected from the

group consisting of organic compounds as defined in anyone

of claims 3 to 5.

(ORIGINAL) A method for detecting the activity of a 15.

regulatory sequence in suitable cells, comprising

preparing transformed cells, comprising at least a

nucleotide sequence coding for the Bax gene or a

biologically active derivative thereof, operably

to nucleotide sequence comprising a

potential regulatory sequence,

(b) treating the transformed cells with a chemical,

measuring the expression of the Bax gene or (c) the

biologically active derivative thereof in the

transformed cells, and

(d) correlating the Bax expression with the activity of

the regulatory sequence.

16. (ORIGINAL) The method according to claim 15, wherein the

regulatory sequence is a promoter sequence.

(CANCELLED) 17.

18. (CURRENTLY AMENDED) The method according to anyone of

claims 15 to 17, wherein the transformed cells form at

least part of a transgenic plant.

-5**-**

TC Art Unit:

Confirmation No.:

(CURRENTLY AMENDED) The method according to anyone of 19. claims 15-to 18, wherein the expression of the Bax gene is

detected as necrotic area in the plant.

20. (NEW) A host organism containing the vector according to

claim 7.

The host organism according to claim 20, which is 21.

selected from the group consisting of a bacteria cell and

a plant cell.

22. The transgenic plant according to claim 11, wherein

the transgene contained in the second nucleotide sequence

is transiently expressed.

The transgenic plant according to claim 11, wherein 23. (NEW)

the expression of the transgene contained in the second

nucleotide sequence is selectively induced upon treatment

with chemicals.

24. The transgenic plant according to claim 23, wherein

the chemicals are selected from the group consisting of

organic compounds.

25. The recombinant nucleic acid according to claim 5,

further containing a reporter system which comprises at

nucleotide least one sequence, wherein the

expression/transcription of said nucleotide sequence

results in a detectable signal.

-6-

TC Art Unit:

Confirmation No.:

(NEW) A vector containing the recombinant nucleic acid 26.

according to claim 25. .

27. A host organism containing the recombinant nucleic

acid according to claim 25.

28. A host organism containing the vector according to

claim 26.

(NEW) A method for detecting the activity of a regulatory 29.

sequence in suitable cells, comprising

preparing transformed cells, comprising at least a

nucleotide sequence coding for the Bax gene or a

biologically active derivative thereof,

linked to a nucleotide sequence comprising

potential regulatory sequence,

(b) treating the transformed cells with a chemical

selected from the group of claim 3,

(c) measuring the expression of the Bax gene or the

biologically active derivative thereof in the

transformed cells, and

(d) correlating the Bax expression with the activity of

the regulatory sequence.

30. A method for detecting the activity of a regulatory

sequence in suitable cells, comprising

preparing transformed cells, comprising at least a

nucleotide sequence coding for the Bax gene or a

biologically active derivative thereof, operably

Confirmation No.:

linked to a nucleotide sequence comprising a potential regulatory sequence,

- (b) treating the transformed cells with a chemical selected from the group of claim 5,
- (c) measuring the expression of the Bax gene or the biologically active derivative thereof in the transformed cells, and
- (d) correlating the Bax expression with the activity of the regulatory sequence.
- 31. (NEW) The method according to claim 30, wherein the transformed cells form at least part of a transgenic plant.
- 32. (NEW) The method according to claim 31, wherein the expression of the Bax gene is detected as necrotic area in the plant.
- 33. (NEW) The host organism according to claim 20, which is selected from the group consisting of a bacteria cell and a plant cell.
